30
31 USBmd driver is an experimental modified version of already existing USB driver in linux.
32
33 Purpose of this modified version is for doing more sophisticated debugging of USB endpoints and devices and as
34 USB packet sniffer. Technical Necessity for this was created due to prolonged data theft, id spoofing and cybercrime th
35 in author's personal electronic devices for years that resulted in a Cybercrime Police Complaint also few years ago.
36
37 There were also such incidents while developing open source code (some code commits have description of these mysteriou
38
39 This is also done as a technical learning exercise to analyze USB Hosts, packets and USB's interaction,if any, with win
40 mobiles, wireless LANs(radiotap) etc.,
41
42 In the longterm USBmd might have to be integrated into VIRGO. As VIRGO would would have the synergy of AstroInfer machi
43 codebase for "learning" from datasets, this USBmd driver can have the added ability of analyzing large USB traffic (as
44 using some decision making algorithms and evolve as an anti-cybercrime, anti-plagiarism and anti-theft tool to single o
45 "malevolent" traffic that would save individuals and organisations from the travails of tampering and loss of sensitive
46
47 The pattern mining of numeric dataset designed for AstroInfer can apply here also since USB bitstream can be analyzed u
48 numerical dataset mining. Also Discrete Fourier Transform used for analyzing data for frequencies (periodicities if any
49 USB data , for example USB wireless traffic.
50
51 =====
52 new UMB driver bind - 27 Feb 2014 (for Bus id 7)
53 =====
54 Following example commandlines install umb.ko module, unbind the existing option driver from bus-device id and bind the
55
56 sudo insmod umb.ko
57 echo -n "7-1:1.0" > /sys/bus/usb/drivers/option/unbind

```

```

58 echo -n "7-1:1.0" > /sys/bus/usb/drivers/umb/bind
59

NeuronRain version 15.6.15 release tagged

Commits as on 11 July 2015

usbmd kernel module has been ported to Linux Kernel 4.0.5

Commits as on 26 November 2015

- Updated USB-md driver with a lookup of VIRGO kernel_analytics config variable exported by kernel_analytics module in
- New header file umb.h has been added that externs the VIRGO kernel_analytics config array variables
- Module.symvers has been imported from VIRGO kernel_analytics and clean target has been commented in build script after
- kern.log with umb_read() and umb_write() have been added with following commandlines:
 - cat /dev/umb0 - invokes umb_read() but there are kernel panics sometimes
 - cat <file> > /dev/umb0 - invokes umb_write()
- where umb0 is usb-md device name registered with /sys/bus/usb as below:
 - insmod umb.ko
 - echo -n "7-1:1.0" > /sys/bus/usb/drivers/option/unbind
 - echo -n "7-1:1.0" > /sys/bus/usb/drivers/umb/bind
- Updated build generated sources and object files have been added

Commits as on 27 November 2015

New folder usb_wwan_modified has been added that contains the USB serial, option and wireless USB modem WWAN drivers from instrumented with lot of printk()s so that log messages are written to kern.log. Though dev_dbg dynamic debugging can be used, printk()s are sufficient for now. This traces through the USB connect and data transfer code:

- probe
- buffer is copied from userspace to kernelspace
- URB is allocated in kernel
- buffer is memcopied to URB
- usb send/receive bulk pipe calls
- usb_fill_bulk_urb

Almost all buffers like in and out buffers in URBs, portdata, interfacedata, serial_data, serial_port_data are printed and are analyzable by AsFer machine learning code for USB debugging similar to usbmon logs.

These are initial commits only and usb-serial.c, usb_wwan.c, option.c and serial.h might be significantly altered going forward.

Commits as on 30 November 2015

Added usb.h from kernel mainline, instrumented with printk() to print transfer_buffer in usb_fill_[control/bulk/interrupt]_urb

Commits as on 1 December 2015

- new kernel function print_buffer() has been added in usb.h that prints contents of char buffer in hex
- Above print_buffer() is invoked to print transfer_buffer in usb_wwan.c, usb-serial.c, option.c
- kern.log with print_buffer() output has been added - This dumps similar to wireshark, usbmon and other usb analyzers.

Commits as on 2 December 2015

- changed print_buffer() printk() to print a delimiter in each byte for AsFer Machine Learning code processing
- add a parser script for kern.log to print print_buffer() lines
- parsed kern.log with print_buffer() lines has been added
- Added an Apache Spark MapReduce python script to compute byte frequency in parsed print_buffer() kern.log

(ONGOING) NeuronRain USBmd Debug and Malafide Traffic Analytics

As mentioned in commit notes above, USB incoming and outgoing data transfer_buffer are dumped byte-by-byte. Given this, analytics can be performed most of which are already implemented in AsFer codebase:

- frequency of bytes
 - most frequent sequence of bytes
 - bayesian and decision tree inference
 - deep learning
 - perceptrons
 - streaming algorithms for USB data stream
- and so on.

Commits as on 3 December 2015

- Apache Spark script for analyzing the USBWWAN byte stream logs has been updated with byte counts map-reduce functions and temp DataFrame Table creation with SparkSQL.
- logs for the script have been added in usb_wwan_modified/python-src/testlogs/Spark_USBWWANLogMapReduceParser.out.3Dec

```

220 - kern.log parser shellscript has been updated
221
222 -----
223 AsFer commits for USBmd as on 4 December 2015
224 -----
225 All the Streaming_<>.py Streaming Algorithm implementations in AsFer/python-src/ have been updated with:
226 - hashlib ripemd160 hash MD algorithm for hash functions and return hexdigest()
227 - USBWWAN byte stream data from USBmd print_buffer() logs in usb-md/usb_wwan_modified/testlogs/ has been added as a Dat
228 - logs for the above have been added to asfer/python-src/testlogs/
229 - Streaming Abstract Generator has been updated with USB stream data iterable and parametrized for data source and stor
230 - Some corrections to the asfer/python-src/Streaming_<> scripts
231
232 -----
233 Commits as on 7 December 2015
234 -----
235 - added Spark Mapreduce and DataFrame log for USBWWAN byte stream
236 - added a parsed kern.log with only bytes from USBWWAN stream
237 - Added dict() and sort() for query results and printed cardinality of the stream data set which is the size of the dic
238 An example log has been added which prints the cardinality as ~250. In contrast, LogLog and HyperLogLog counter estimat
239 approximate the cardinality to 140 and 110 respectively
240
241 -----
242 AsFer commits for USBmd as on 11 December 2015 - USBWWAN stream data backend in MongoDB
243 -----
244 Dependency Injection code commits for MongoDB backend - With this MongoDB is also a storage backend for AsFer algorithm
245 - Abstract_DBBBackend.py has been updated for both MySQL and MongoDB injections
246 - MongoDB configuration and backend connect/query code has been added. Backend is either populated by Robomongo or pymo
247 Streaming Abstract Generator iterable framework.
248 - With this AsFer supports both SQL(MySQL) and NoSQL(file,hive,hbase,cassandra backends in Streaming Abstract Generator
249 - log with a simple NoSQL table with StreamingData.txt and USBWWAN data has been added to testlogs/.
250 - MongoDB configuration has a database(asfer-database) and a collection(asfer-collection).
251 - MongoDB_DBBBackend @provides pymongo.collection.Collection which is @inject-ed to Abstract_DBBBackend
252
253 -----
254 Commits as on 10 January 2016
255 -----
256 NeuronRain USBmd enterprise version 2016.1.10 released.
257
258 -----
259 Commits - 4 August 2016
260 -----
261 1.New build script for drivers/usb top level folder has been added.
262 2.Copyleft notices updated
263 3.print_buffer() in usb.h has been #ifdef-ed based on a build time flag to suppress the buffer bytes dump preferentiall
264 kern.log is not flooded.
265 4.Flag PRINT_BUFFER has to be defined with #define somewhere within KBuild makefiles or externally.
266 5..ko files rebuilt
267 6. Miscellaneous code changes to suppress kbuild warnings - cast etc.,
268 7. PRINT_BUFFER block changed to print the bytes in single line for each buffer
269
270 -----
271 Commits - 13 July 2017 - usb-storage driver last sector access slab out of bounds error in 64-bit - committed for analy
272 - this error was frequently witnessed in VIRGO 32-bit stability issues and panics - ISRA looks like a GCC
273 optimization of a function invocation (Interprocedural Scalar Replacement of Aggregates)

457 -----
458 (FEATURE-DONE) Spark Cloud Analytics for Linux Kernel 4.10.3 64 bit with Kernel Address Sanitizer debug logging enabled
459 - Commits 1
460 -----
461 (*) Upgraded Spark version to 2.1.0 on Hadoop 2.7
462 (*) Changed to SparkContext text file instead of reading the input kernel log in python I/O

```

```

463  (*) Added flatMap to front of MapReduce chain of transformations for tokenizer
464  (*) Changed the input kernel log to 64bit 4.10.3 Kernel Address Sanitizer enabled kern.log which prints lot of debugging
465  memory accesses especially for USBWWAN and USB Storage drivers.
466  (*) This is an alternative to traditional promiscuous USB Analyzers like WireShark to get kernel stack traces for USB a
467  (*) Particularly useful in malware related untoward memory access and traffic analysis
468  (*) Unifies Kernel Address Sanitizer, USB storage/WLAN driver and Spark Cloud for analytics
469  (*) Logs for this have been committed to testlogs/ and python-src/testlogs
470
471  -----
472  (FEATURE-DONE) Spark Cloud Analytics for Linux Kernel 4.10.3 64 bit with Kernel Address Sanitizer debug logging enabled
473  - Commits 2
474  -----
475  (*) Added a substring match filter to RDD map/reduce transformations chain
476  (*) Presently hardcoded as "+0x" which extracts all kernel functions invoked from Kernel Address Sanitizer kern.log and
477
478  Previous profiling prints following top kernel function invocations:
479  (u'last_sector_hacks.isra.1.part.2+0xc9/0x1d0', 159),
480  (u'usb_stor_disconnect+0x120/0x120', 106),
481  (u'save_stack+0x46/0xd0', 106),
482  (u'save_stack_trace+0x1b/0x20', 106),
483  (u'entry_SYSENTER_compat+0x4c/0x5b', 85),
484  (u'kthread+0x178/0x1d0', 74),
485  implying heavy dependence on last_sector_hacks.isra gcc optimization. Discussion on https://groups.google.com/forum/#!t
486
487  -----
488  (FEATURE-DONE) Commits - 24 September 2017 - USB-md driver for USB and Wireless LAN analytics for 4.13.3 64-bit kernel
489  -----
490  (*) USB-md driver in GitHub and SourceForge at present are 32-bit based on mainline 4.1.5 kernel
491  (*) Both USB-md and KingCobra kernel modules are subsidiaries of VIRGO kernel
492  (*) There is a necessity for 64-bit version of USB-md for interoperability to VIRGO64 64-bit kernel on mainline version
493  (*) This requires separate repository for USB-md because of significant kernel function changes between 4.1.5 and 4.13.
494  idiosyncrasies of 64-bit
495  (*) USB-md driver has been rebuilt on 4.13.3 64-bit kernel after some changes to function prototypes and new usb-md64 m
496  initialized with these commits

```
