23
24 USBmd driver is an experimental modified version of already existing USB driver in linux.
25
26 Purpose of this modified version is for doing more sophisticated debugging of USB endpoints and devices and as
27 USB packet sniffer. Technical Necessity for this was created due to prolonged data theft, id spoofing and cybercrim
28 in author's personal electronic devices for years that resulted in a Cybercrime Police Complaint also few years ago
29
30 There were also such incidents while developing open source code (some code commits have description of these mysteri
31
32 This is also done as a technical learning exercise to analyze USB Hosts, packets and USB's interaction,if any, with
33 mobiles, wireless LANs(radiotap) etc.,
34
35 In the longterm USBmd might have to be integrated into VIRGO. As VIRGO would have the synergy of AstroInfer
36 codebase for "learning" from datasets, this USBmd driver can have the added ability of analyzing large USB traffic
37 using some decision making algorithms and evolve as an anti-cybercrime, anti-plagiarism and anti-theft tool to stop
38 "malevolent" traffic that would save individuals and organisations from the travails of tampering and loss of sens
39
40 The pattern mining of numeric dataset designed for AstroInfer can apply here also since USB bitstream can be analyzed
41 numerical dataset mining. Also Discrete Fourier Transform used for analyzing data for frequencies (periodicities in
42 USB data , for example USB wireless traffic.
43
44 =====
45 new UMB driver bind - 27 Feb 2014 (for Bus id 7)
46 =====
47 Following example commandlines install umb.ko module, unbind the existing option driver from bus-device id and bind
48
49 sudo insmod umb.ko
50 echo -n "7-1:1.0" > /sys/bus/usb/drivers/option/unbind
51 echo -n "7-1:1.0" > /sys/bus/usb/drivers/umb/bind
52
53 =====
54 1055. Commits as on 29 July 2014
55 =====
56 Driver has been ported and built on 3.15.5 kernel. Also a driver build script has been committed.

1059. Commits as on 11 July 2015

usbmd kernel module has been ported to Linux Kernel 4.0.5

1060. Commits as on 26 November 2015

- Updated USB-md driver with a lookup of VIRGO kernel_analytics config variable exported by kernel_analytics module
 - New header file umb.h has been added that externs the VIRGO kernel_analytics config array variables
 - Module.symvers has been imported from VIRGO kernel_analytics and clean target has been commented in build script
 - kern.log with umb_read() and umb_write() have been added with following commandlines:
 - cat /dev/umb0 - invokes umb_read() but there are kernel panics sometimes
 - cat <file> > /dev/umb0 - invokes umb_write()
- where umb0 is usb-md device name registered with /sys/bus/usb as below:
- insmod umb.ko
 - echo -n "7-1:1.0" > /sys/bus/usb/drivers/option/unbind
 - echo -n "7-1:1.0" > /sys/bus/usb/drivers/umb/bind
- Updated build generated sources and object files have been added

1061. Commits as on 27 November 2015

New folder usb_wwan_modified has been added that contains the USB serial, option and wireless USB modem WWAN driver instrumented with lot of printk()s so that log messages are written to kern.log. Though dev_dbg dynamic debugging printk()s are sufficient for now. This traces through the USB connect and data transfer code:

- probe
- buffer is copied from userspace to kernelspace
- URB is allocated in kernel
- buffer is memcopied to URB
- usb send/receive bulk pipe calls
- usb_fill_bulk_urb

Almost all buffers like in and out buffers in URBs, portdata, interfacedata, serial_data, serial_port_data are printable and analyzable by AsFer machine learning code for USB debugging similar to usbmon logs.

These are initial commits only and usb-serial.c, usb_wwan.c, option.c and serial.h might be significantly altered

1062. Commits as on 30 November 2015

Added usb.h from kernel mainline, instrumented with printk() to print transfer_buffer in usb_fill_[control/bulk/interrupt]

```
178 -----
179
180 1063. Commits as on 1 December 2015
181 -----
182 - new kernel function print_buffer() has been added in usb.h that prints contents of char buffer in hex
183 - Above print_buffer() is invoked to print transfer_buffer in usb_wwan.c, usb-serial.c, option.c
184 - kern.log with print_buffer() output has been added - This dumps similar to wireshark, usbmon and other usb analy
185
186 -----
187 1064. Commits as on 2 December 2015
188 -----
189 - changed print_buffer() printk() to print a delimiter in each byte for AsFer Machine Learning code processing
190 - add a parser script for kern.log to print print_buffer() lines
191 - parsed kern.log with print_buffer() lines has been added
192 - Added an Apache Spark MapReduce python script to compute byte frequency in parsed print_buffer() kern.log
193
194 -----
195 879. (FEATURE) NeuronRain USBmd Debug and Malafide Traffic Analytics
196 -----
197 As mentioned in commit notes above, USB incoming and outgoing data transfer_buffer are dumped byte-by-byte. Given
198 analytics can be performed most of which are already implemented in AsFer codebase:
199 - frequency of bytes
200 - most frequent sequence of bytes
201 - bayesian and decision tree inference
202 - deep learning
203 - perceptrons
204 - streaming algorithms for USB data stream
205 and so on.
206
207 -----
208 1065. Commits as on 3 December 2015
209 -----
210 - Apache Spark script for analyzing the USBWWAN byte stream logs has been updated with byte counts map-reduce func
211 and temp DataFrame Table creation with SparkSQL.
212 - logs for the script have been added in usb_wwan_modified/python-src/testlogs/Spark_USBWWANLogMapReduceParser.out
213 - kern.log parser shellscript has been updated
214
215 -----
216 1066. AsFer commits for USBmd as on 4 December 2015
217 -----
```

218 All the Streaming_<>.py Streaming Algorithm implementations in AsFer/python-src/ have been updated with:
219 - hashlib ripemd160 hash MD algorithm for hash functions and return hexdigest()
220 - USBWWAN byte stream data from USBmd print_buffer() logs in usb-md/usb_wwan_modified/testlogs/ has been added as
221 - logs for the above have been added to asfer/python-src/testlogs/
222 - Streaming Abstract Generator has been updated with USB stream data iterable and parametrized for data source and
223 - Some corrections to the asfer/python-src/Streaming_<> scripts

224 -----
225
226 1067. Commits as on 7 December 2015
227 -----

228 - added Spark Mapreduce and DataFrame log for USBWWAN byte stream
229 - added a parsed kern.log with only bytes from USBWWAN stream
230 - Added dict() and sort() for query results and printed cardinality of the stream data set which is the size of the
231 An example log has been added which prints the cardinality as ~250. In contrast, LogLog and HyperLogLog counters
232 approximate the cardinality to 140 and 110 respectively
233

234 -----
235 880. (FEATURE) AsFer commits for USBmd as on 11 December 2015 - USBWWAN stream data backend in MongoDB
236 -----

237 Dependency Injection code commits for MongoDB backend - With this MongoDB is also a storage backend for AsFer algorithms
238 - Abstract_DDBackend.py has been updated for both MySQL and MongoDB injections
239 - MongoDB configuration and backend connect/query code has been added. Backend is either populated by Robomongo or
240 Streaming Abstract Generator iterable framework.
241 - With this AsFer supports both SQL(MySQL) and NoSQL(file,hive,hbase,cassandra backends in Streaming Abstract Generator
242 - log with a simple NoSQL table with StreamingData.txt and USBWWAN data has been added to testlogs/.
243 - MongoDB configuration has a database(asfer-database) and a collection(asfer-collection).
244 - MongoDB_DDBackend @provides pymongo.collection.Collection which is @inject-ed to Abstract_DDBackend
245

246 -----
247 1068. Commits as on 10 January 2016
248 -----

249 NeuronRain USBmd enterprise version 2016.1.10 released.
250

251 -----
252 1069. Commits - 4 August 2016
253 -----

254 1.New build script for drivers/usb top level folder has been added.
255 2.Copyleft notices updated
256 3.print_buffer() in usb.h has been #ifdef-ed based on a build time flag to suppress the buffer bytes dump preference
257 kern.log is not flooded.

```

258 4.Flag PRINT_BUFFER has to be defined with #define somewhere within KBuild makefiles or externally.
259 5..ko files rebuilt
260 6. Miscellaneous code changes to suppress kbuild warnings - cast etc.,
261 7. PRINT_BUFFER block changed to print the bytes in single line for each buffer
262
263 -----
264 1070. Commits - 13 July 2017 - usb-storage driver last sector access slab out of bounds error in 64-bit - committe
265 - this error was frequently witnessed in VIRGO 32-bit stability issues and panics - ISRA looks like a GCC
266 optimization of a function invocation (Interprocedural Scalar Replacement of Aggregates)
267 -----

451 881. (FEATURE-DONE) Spark Cloud Analytics for Linux Kernel 4.10.3 64 bit with Kernel Address Sanitizer debug loggi
452 - Commits 1
453 -----
454 (*) Upgraded Spark version to 2.1.0 on Hadoop 2.7
455 (*) Changed to SparkContext text file instead of reading the input kernel log in python I/O
456 (*) Added flatMap to front of MapReduce chain of transformations for tokenizer
457 (*) Changed the input kernel log to 64bit 4.10.3 Kernel Address Sanitizer enabled kern.log which prints lot of det

```

memory accesses especially for USBWWAN and USB Storage drivers.

- (*) This is an alternative to traditional promiscuous USB Analyzers like WireShark to get kernel stack traces for
- (*) Particularly useful in malware related untoward memory access and traffic analysis
- (*) Unifies Kernel Address Sanitizer, USB storage/WLAN driver and Spark Cloud for analytics
- (*) Logs for this have been committed to testlogs/ and python-src/testlogs

882. (FEATURE-DONE) Spark Cloud Analytics for Linux Kernel 4.10.3 64 bit with Kernel Address Sanitizer debug logging
- Commits 2

- (*) Added a substring match filter to RDD map/reduce transformations chain
- (*) Presently hardcoded as "+0x" which extracts all kernel functions invoked from Kernel Address Sanitizer kern.log

Previous profiling prints following top kernel function invocations:

```
(u'last_sector_hacks.isra.1.part.2+0xc9/0x1d0', 159),  
(u'usb_stor_disconnect+0x120/0x120', 106),  
(u'save_stack+0x46/0xd0', 106),  
(u'save_stack_trace+0x1b/0x20', 106),  
(u'entry_SYSENTER_compat+0x4c/0x5b', 85),  
(u'kthread+0x178/0x1d0', 74),
```

implying heavy dependence on last_sector_hacks.isra gcc optimization. Discussion on <https://groups.google.com/forum/#!topic/usb-md64>

883. (FEATURE-DONE) Commits - 24 September 2017 - USB-md driver for USB and Wireless LAN analytics for 4.13.3 64-bit

- (*) USB-md driver in GitHub and SourceForge at present are 32-bit based on mainline 4.1.5 kernel
- (*) Both USB-md and KingCobra kernel modules are subsidiaries of VIRGO kernel
- (*) There is a necessity for 64-bit version of USB-md for interoperability to VIRGO64 64-bit kernel on mainline version
- (*) This requires separate repository for USB-md because of significant kernel function changes between 4.1.5 and 4.13.3 and idiosyncrasies of 64-bit
- (*) USB-md driver has been rebuilt on 4.13.3 64-bit kernel after some changes to function prototypes and new usb-md module initialized with these commits

884. USBWWAN Kernel Log Spark Analyzer Update - Refactoring to a new python function - 18 June 2018

1. Spark Log Analyzer Spark_USBWWANLogMapReduceParser.py has been changed to modularize the pattern extraction by defining a new function accepting kern.log file, pattern and filter and also creates Spark DataFrame SQL table and queries it.

2. This is similar to NeuronRain AsFar log mapreducer()

```

497 2. This is similar to netopmndm as it log_mapreduce()
498
499 -----
500 769. (FEATURE) USBWWAN analytics - USBmon and FTrace logs analysis - 15 November 2018 - this section is an extend
501 -----
502 1. Logs Analysis for 2 standard kernel tracing facilities have been included - USBmon and FTrace. USBmon is the
503 kernel debugfs tracing facility and FTrace is the Kernel functions tracing utility accessible from user space. (K
504 2. USBmon traces are enabled by debugfs in /sys/kernel/debug/usb/usbmon and can be loaded in wireshark in libpcap
505 467 ls /sys/kernel/debug/

537 4. FTrace traces for specific userspace threads/processes are enabled by previous example commandlines and available

```

```
537 7. FTrace traces for specific userspace threads/processes are enabled by previous example commandlines and available
538 5. Spark_USBWWANLogMapReduceParser.py has been changed to invoke log analyzer for USBmon and FTrace logs for
539 patterns Bi(BULK IN) and usb from USBmon and FTrace logs respectively:
540 - usbmon.15November2018.mon
541 - ftrace.ping.log.15November2018 (ftraces for ping of an IP address)
542 6. Logs for Spark Analyzer have been committed to Spark_USBWWANLogMapReduceParser.FTraceAndUSBMon.log.15November20
543
544 -----
545 770. (THEORY and FEATURE) Program Analysis and Software Analytics - USBmd FTrace Kernel Function CallGraph Generat
546 -----
547 1.New bash shell script usb_md_ftrace.sh has been committed to repository which writes out an ftrace.log
548 file containing kernel function call graph sequences for an executable code. It is invoked as:
549     $usb_md_ftrace.sh <executable-to-trace>
550 usb_md_ftrace.sh summarizes previously mentioned ftrace options enabling commands into single file with an
551 option for commandline argument of an executable to trace.
552 2.usb_wwan_modified/python-src/Spark_USBWWANLogMapReduceParser.py has been changed to include a new function
553 ftrace_callgraph_dot() which parses an ftrace log generated by usb_md_ftrace.sh for command:
554     $usb_md_ftrace.sh traceroute <ip-address>
555 3.ftrace_callgraph_dot() parses each line of ftrace.log and adds them as edges in a NetworkX Directed Graph. DOT
556 file for this call graph is written to Spark_USBWWANLogMapReduceParser.ftrace_callgraph.dot
557 4.As a novelty, PageRank and Degree Centrality measures of the call graph NetworkX DiGraph are printed which show
558 5. Lot of functions have ISRA optimization of GCC. ISRA is known to cause signed int bugs (0 was erroneously promc
559 6.Previous FTrace kernel call graph analysis is not only limited to USBmd WLAN analytics but can be applied to any
560 7. Malicious code (e.g virus, worms, root-kits, bots, keystroke loggers) are usually associated with high cpu and
561 8. FTrace kernel function call graph complements already implemented Program Analyzers: SATURN CFG driver in VIRGC
562 9. Outbreak of epidemics have been analyzed as Game Theoretic problem (https://blogs.cornell.edu/info2040/2016/09/
```
